Kobo for dummies

Adapting and Deploying the RISA Form During a Mission

1. Excel File

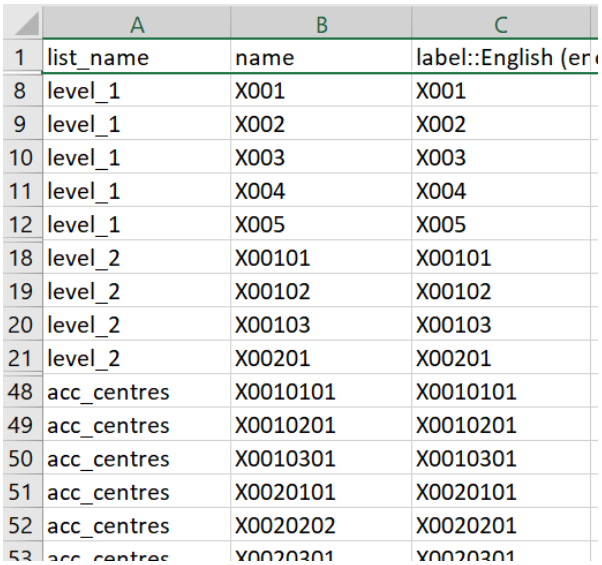

To adapt the RISA form to the country of deployment, you first need to modify the **RISA XLSForm** in Microsoft Excel.

Start by making a copy of the original file and rename it using the following convention:

RISA_CountryName.xlsx

Open the copied file in Excel and navigate to the **Choices** worksheet.

In this worksheet, you can modify the **Label::English** column to reflect the administrative divisions and locations relevant to the country of operation.

	A	B	C
1	list_name	name	label::English (er
8	level_1	X001	X001
9	level_1	X002	X002
10	level_1	X003	X003
11	level_1	X004	X004
12	level_1	X005	X005
18	level_2	X00101	X00101
19	level_2	X00102	X00102
20	level_2	X00103	X00103
21	level_2	X00201	X00201
48	acc_centres	X0010101	X0010101
49	acc_centres	X0010201	X0010201
50	acc_centres	X0010301	X0010301
51	acc_centres	X0020101	X0020101
52	acc_centres	X0020202	X0020201
53	acc_centres	X0020301	X0020301

- **Level_1** rows correspond to the country's **first-level administrative divisions** (e.g., provinces, states, or regions). Enter the name of each province in the **Label::English** column. Add as many rows as required, keeping **level_1** in the first column and assigning sequential codes in the second column (e.g., **X001**, **X002**, **X003**, etc.).
- **Level_2** rows correspond to the **second-level administrative divisions** (e.g., districts or counties). Districts belonging to province **X001** should be coded **X00101**, **X00102**, and so on. Add one row for each district while following the same coding convention.
- **acc_centres** rows correspond to **Accommodation Centres (camps)**. These are coded according to the province and district to which they belong. For example, **X0080203** refers to the **third accommodation centre** located in **District 02** of **Province 08**. Add one row for each accommodation centre following the same hierarchical coding structure.
- Once all provinces, districts, and accommodation centres have been entered, **save the Excel file and close the document** before importing it into KoboToolbox.

2. KoboToolbox

Open your web browser, search for **KoboToolbox**, and open the website.

- Click **Get Started for Free**.
- Under **Global KoboToolbox Server**, click **Sign In**.
- Log in using the following credentials:
    - **Username:** atlasdak3
    - **Password:** undac123!
- Once on the KoboToolbox homepage, click **New**, then select **Import an XLSForm**.
- Drag and drop the **RISA_CountryName.xlsx** file (or browse to select it).
- Enter the project details, for example:
    - **Project Name:** *RISA Mozambique*
    - **Description:** *Rapid Infrastructure Site Assessment – Mozambique*
    - **Sector:** *Humanitarian Coordination*
    - **Country:** *Mozambique*
- Click **Create Project**.
- Once the project has been created, click **Deploy** to make the survey available for data collection.

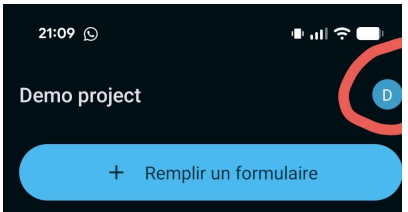

- The **pencil** icon allows you to **edit the form** directly in KoboToolbox.
- The **eye** icon allows you to **preview and test the form** before deployment.
- The **two arrows** icon allows you to **upload a new version of the XLSForm**, replacing the current one while preserving the existing project.
- Finally, the **three-dot menu** provides additional options, including the ability to **share the form** with other users via a direct link or project permissions.

3. KoboCollect

Install **KoboCollect** from the **Google Play Store** on an Android tablet or smartphone.

- Open the application and tap **Try Demo** at the bottom of the screen.
- In the top-right corner, tap the **"D"** icon, then select **Settings**.
    - *(If KoboCollect has already been configured, this icon may display a different letter corresponding to the initial of the previously configured project.)*
- Open **Server Settings**.
- In the **URL** field, replace the existing server address with:

https://kc.kobotoolbox.org/atlasdak3

- Return to the home screen.
- Tap **Get Blank Form**.
- Select the **RISA** form you have created (e.g., **RISA_Mozambique**) and tap **Get Selected**.

The device is now ready for field data collection.

To begin an assessment, tap **Fill Blank Form** and select the appropriate **RISA** survey.

4. Configuring Multiple Devices

Once the first tablet has been configured, you can quickly duplicate the configuration on additional devices using a QR code.

Generate the QR Code

On the configured tablet:

- Tap the **"D"** icon in the top-right corner.
- Select **Project Management**.
- Tap **Reconfigure with QR Code**.
- In the top-right corner, tap the **QR Code** icon.
- Keep the QR code displayed on the screen.

Configure Additional Tablets

On each new tablet, you can either:

- Select **Configure with QR Code** when opening KoboCollect for the first time;

or

- Tap the **"D"** icon, then go to **Project Management** > **Reconfigure with QR Code**, and select **Scan QR Code**.

Scan the QR code displayed on the configured tablet.

The new device will automatically copy the server settings and project configuration, allowing all tablets to use the same KoboCollect configuration without manual setup.

Configuration complete.
